

PARTIE 3

Soit $\theta \in \mathbb{R}$.

1)

$$e^{i\frac{\theta}{2}} = e^{-i\frac{\theta}{2}}$$

$$\Leftrightarrow \cos \frac{\theta}{2} + i \sin \frac{\theta}{2} = \cos -\frac{\theta}{2} + i \sin -\frac{\theta}{2}$$

$$\Leftrightarrow \cos \frac{\theta}{2} + i \sin \frac{\theta}{2} = \cos \frac{\theta}{2} - i \sin \frac{\theta}{2}$$

$$\Leftrightarrow \begin{cases} \cos \frac{\theta}{2} = \cos \frac{\theta}{2} \\ \sin \frac{\theta}{2} = -\sin \frac{\theta}{2} \end{cases}$$

$$\Leftrightarrow \sin \frac{\theta}{2} = -\sin \frac{\theta}{2}$$

$$\Leftrightarrow 2\sin \frac{\theta}{2} = 0$$

$$\Leftrightarrow \sin \frac{\theta}{2} = 0$$

$$\Leftrightarrow \frac{\theta}{2} = h\pi, \quad h \in \mathbb{Z}$$

$$\Leftrightarrow \theta = 2h\pi, \quad h \in \mathbb{Z}$$

$$\Leftrightarrow \theta \in 2\pi\mathbb{Z}$$

Soit $n \in \mathbb{N}^*$. On pose:

$$E_n = \sum_{h=0}^n e^{ih\theta}$$

$$S_n = \frac{1}{n} \sum_{h=0}^n \cos(h\theta), \quad T_n = \frac{1}{n} \sum_{h=1}^n \sin(h\theta)$$

2) Soit $\theta \notin 2\pi\mathbb{Z}$

$$a) E_n = \sum_{h=0}^n e^{ih\theta} = \sum_{h=0}^n (e^{i\theta})^h$$

$$= \frac{1 - e^{i\theta(n+1)}}{1 - e^{i\theta}} \quad \text{or } \theta \notin 2\pi\mathbb{Z} \Rightarrow 1 - e^{i\theta} \neq 0$$

$$= \frac{e^{i\theta(n+1)} - 1}{e^{i\theta} - 1}$$

D'autre part,

$$\frac{\sin \frac{(n+1)\theta}{2}}{\sin \frac{\theta}{2}} e^{i\frac{n\theta}{2}} = \frac{(e^{i\frac{n+1}{2}\theta} - e^{-i\frac{n+1}{2}\theta})}{e^{i\frac{\theta}{2}} - e^{-i\frac{\theta}{2}}} e^{i\frac{n\theta}{2}}$$

$$= \frac{e^{i(\theta_n + \frac{\theta}{2})} - e^{-i\frac{\theta}{2}}}{e^{i\frac{\theta}{2}} - e^{-i\frac{\theta}{2}}}$$

$$= e^{i\theta_n} \cdot 1$$
